Responsible Mineral Sourcing

2025 3TG SORs Certified as Conformant by RMAP in Supply Chain

We continue to conduct count r -of-origin investigations, tracing and analyzing the sources of 3TG in our supply chain by integrating the Reasonable Count r of Origin Inqui r (RCOI) tool with RMAP audit results. By comparing smelter information provided by suppliers with database records, we determined the count r distribution of the 212 SORs involved in the supply chain and fu r her identi fed the potential countries of origin for 3TG minerals. At the same time, we assist suppliers in establishing responsible mineral management systems that comply with the Company's requirements through online coaching and collaboration, continuously strengthening their capabilities for source risk identi fcation and control.

Potential Countries of Origin

Tin sourced from

- Australia
- China
- Laos
- Malaysia
- Mongolia
- Namibia
- Peru
- Po r ugal
- Spain
- Vietnam etc.

Tantalum sourced from

- Australia
- China
- France
- Madagascar
- Sierra Leone
- Spain
- Thailand etc.

Tungsten sourced from

- Australia
- Brazil
- China
- Malaysia
- Mongolia
- Po r ugal
- Spain
- Thailand
- the United Kingdom
- the United States etc.

Gold sourced from

- Benin
- Canada
- Chile
- Guyana
- Papua New Guinea
- the Philippines
- Sweden
- Uzbekistan
- Japan etc.

Based on due diligence and RCOI investigation results, the Company conducts risk level assessments for its suppliers. For high-risk suppliers, the Company requires them to complete RMAP ce r ifcation for non-compliant SORs within the speci fed timeframe or remove them from the supply chain. Moreover, the Company provides specialized guidance and conducts social responsibility audits that include con fict mineral evaluation criteria. It continuously tracks, assesses, and veri fes their SORs ce r ifcation and mineral traceability processes until all SORs in the supply chain meet the required standards, at which point the case is closed. For suppliers that are not high-risk, the Company enhances their con fict minerals management capabilities and awareness through regular training.

As of the end of the Repo r ing Period, Luxshare Precision:

Percentage of 3TG materials involved in all products sourced from RMAP conformant SORs

100 %

Percentage of 3TG materials involved in all products traceable to the count r of origin

100 %
